

Datastreams Module Consent Management v.0.1.9

RELEASE NOTES

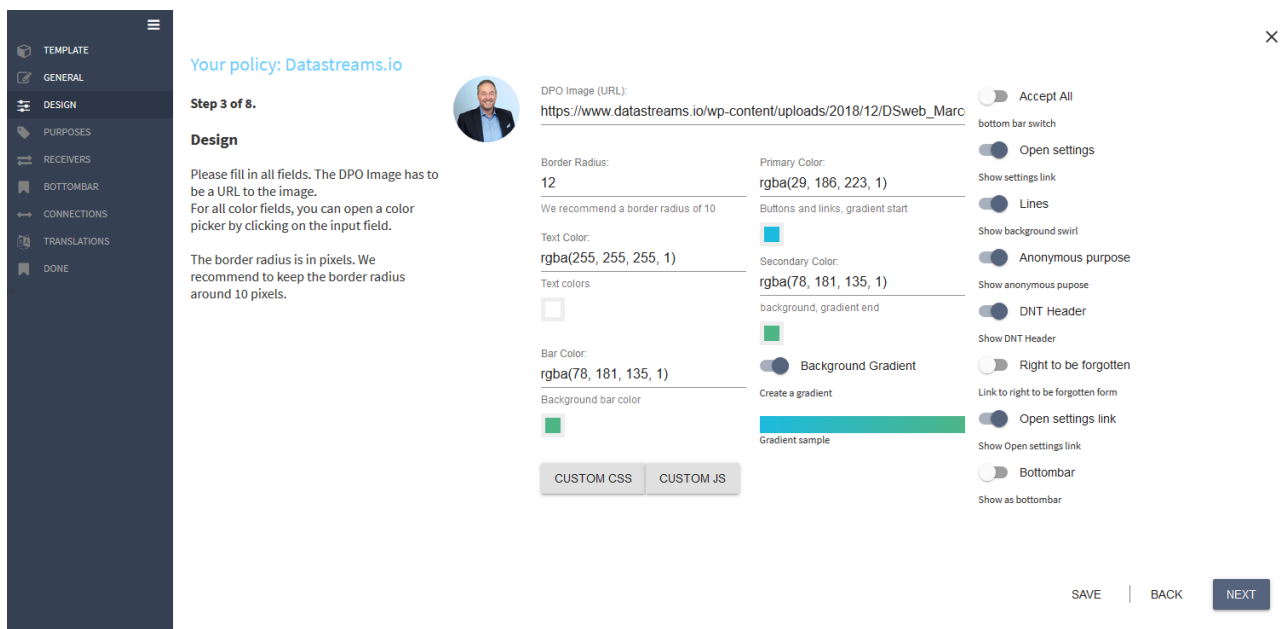

Check out our latest updates: V.0.1.9

Starting this week we have new updates and new features within the user interface of the Datastreams Module Consent Management.

What are the new features?

Overview of the workflow. Now, when you've created a consent solution and you want to change something, it's not needed to walk through the whole wizard. This makes editing the consent solution much faster. Just go to the section in the menu column you wish to edit, make changes and press **save**. Also we've created more working space for easier editing.

Easy Save. Now you are able to save each individual section within the wizard. It's not needed anymore to walk through all the steps of the wizard to make changes. This will save a lot of time!

Want to know more about these new features in order to leverage and govern your consent management for creating a dialogue with your customer? [Contact us!](#)
